

# VENTI.Plus™

Hyperinflation System

Patent Pending.

# Features

For continuous improvement, product specifications subject to change without prior notice.

**Venti.Plus™** Hyperinflation System with built-in pressure manometer enables continuous monitoring of air pressure entering patient's lung when it is used to temporarily ventilate a neonate or child in hospital or during emergency transport. Combining all-in-one piece design and the enhanced safety feature, *Venti.Plus™* Hyperinflation System provides a solution that aims to maximize the survival rate of neonate and pediatric patients.

## Flexible

- Two-plane 360° swivel on patient connection elbow for maximum flexibility.
- Smooth circular adjustable exhalation port valve for ease to control pressure level with one hand.

## Easy to Monitor

- 360° swivel body with manometer allows the best and most comfortable viewing position for both left-handed and right-handed user.
- Color-coded ranges allow easier viewing from all angles.

## Slim, Compact & Lightweight

- Clean streamline design.
- Ultra-thin, kink-free oxygen tubing reduces the weight of the device.

## Built-in Manometer

- Ready to use.
- Avoid misplacement or accidental detachment during use.

## The "Touch"

- Soft breathing bag with the lung compliance touch.
- Bags in 3 sizes (0.25L, 0.50L and 1.0L) tailored to different needs.

## Convenient

- Built-in swivel design and suction port for suction without disengagement of the hyperinflation system from the patient.

## Order Information

### **Venti.Plus™** Hyperinflation System

Package: 1set/Paper pouch, 20Paper pouch/ctn

H025	Hyperinflation System, Premature	0.25L
H050	Hyperinflation System, Neonate	0.5L
H100	Hyperinflation System, Pediatric	1.0L

Package: 1set/Paper pouch, 10Paper pouch/ctn

H025-M	Hyperinflation System with Mask, Premature	0.25L
H050-M	Hyperinflation System with Mask, Neonate	0.5L
H100-M	Hyperinflation System with Mask, Pediatric	1.0L
