

VENTi.Plus

Hyperinflation System

GaleMed[®]

Hyperinflation System

Venti.Plus Hyperinflation System with built-in pressure manometer enables continuous monitoring of air pressure entering patient's lung when it is used to temporarily ventilate a neonate or child in hospital or during emergency transport. Combining all-in-one piece design and the enhanced safety feature, **Venti.Plus** Hyperinflation System provides a solution that aims to maximize the survival rate of neonate and pediatric patients.

Flexible

- Two-plane 360° swivel on patient connection elbow for maximum flexibility.
- Smooth circular adjustable exhalation port valve for ease to control pressure level with one hand.

Easy to Monitor

- 360° swivel body with manometer allows the best and most comfortable viewing position for both left-handed and right-handed user.
- Color-coded ranges allow easier viewing from all angles.

Slim, Compact & Lightweight

- Clean streamline design.
- Ultra-thin, kink-free oxygen tubing reduces the weight of the device.

Built-in Manometer

- Ready to use.
- Avoid misplacement or accidental detachment during use.

The "Touch"

- Soft breathing bag with the lung compliance touch.
- Bags in 3 sizes (0.25L, 0.5L and 1.0L) tailored to different needs.

Convenient

- Built-in swivel design and suction port for suction without desengagement of the hyperinflation system from the patient.

REF	Description	QTY
AR0023	Venti.Plus Hyperinflation Kit, 0.25L	20 pcs/carton
AR0024	Venti.Plus Hyperinflation Kit, 0.5L	20 pcs/carton
AR0025	Venti.Plus Hyperinflation Kit, 0.5L w/Mask	20 pcs/carton
AR0026	Venti.Plus Hyperinflation Kit, 1.0L	20 pcs/carton
